Raising the bar

The next-generation height-adjustable table

To Adjust Height:

Step 1 Engage the Release Paddle with one hand.

Step 2 Using both hands, raise or lower the Work Surface to the desired height.

Step 3 Table should rise and lower easily.

If the table is proving difficult to raise, turn the Counterbalance Crank (found on the right side of the underside of the Work Surface) clockwise.

If the table is proving difficult to lower, turn the Counterbalance Crank counterclockwise.

Step 4 Table will automatically lock into position once the Paddle is released.

Better for the environment. Better for today's employees.

Float is among the most sustainable height-adjustable tables on the market today. Made predominantly of recycled aluminum and steel, Float is built for a long, serviceable life, as backed by its five (5) year warranty. Using its own seamless counterbalance rather than electricity, Float is also far more energy-efficient than powered height-adjustable tables.

Float not only provides a sustainable solution for the contemporary office, but also helps to improve the health, comfort and productivity of the employees who use it.

Humanscale. Human-kind. Earth-friendly.
